DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-54 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-32 of U.S. Patent No. 6,518,724. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to one the ordinary person skill in the art to as both the application and the patent are directed to the device includes a wall switch plate, a receptacle, a control charging module, and an AC power input. The wall switch plate is fastened to a light switch module on a wall. The receptacle is capable of holding a portable electronic component / device. The control

charging module includes electrical contacts corresponding to electrical contacts on the portable electronic device. The control charging module also includes a printed circuit board and an integrated circuit. The AC power input supplies power to the portable electronic device when the portable electronic device is docked in the device docking apparatus .

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
